

*SST11CP16 is a versatile power amplifier based on the highly-reliable InGaP/GaAs HBT technology. It is easily configured for high-linearity, high-efficiency applications, with superb power-added efficiency, while operating over the 5.1-5.9 GHz frequency band. SST11CP16 has the excellent linearity required by the 802.11a/n/ac applications. SST11CP16 provides 19 dBm with less than 1.8% EVM using 802.11ac modulation, with 80 MHz bandwidths and 351 Mbps data rate. It meets 802.11a spectrum mask requirements at 25 dBm and 802.11n HT20 spectrum mask at 24.5 dBm. This power amplifier also features easy, board-level usage along with high-speed power-up/-down control through a single reference voltage pin. SST11CP16 is offered in a 16-contact XQFN package with 0.5mm maximum thickness.*

## Features

- **Small package size**
  - 16-contact XQFN (3mm x 3mm x 0.5mm max thickness)
- **Operating voltage**
  - $V_{CC} = 5.0V$
- **High linear output power across 5.1-5.9 GHz @ 5V:**
  - 802.11a OFDM Spectrum mask compliant up to 25 dBm typically
  - 802.11n HT20 OFDM Spectrum mask compliant up to 24.5 dBm typically
  - 3% EVM up to 21.5 dBm, typically for 802.11a, 54 Mbps signal
  - 2.5% EVM up to 19 dBm, typically for 802.11n, 65 Mbps signal
  - 1.8% EVM up to 19 dBm, typically for 802.11ac, 351 Mbps, 80 MHz BW signal
- **High power-added efficiency/low operating current for 54 Mbps 802.11a applications**
  - ~11% @  $P_{OUT} = 23$  dBm for 802.11a OFDM, 5V  $V_{CC}$
- **Gain:**
  - Typically 30 dB gain across band 5.1-5.9 GHz
- **Idle current**
  - ~250 mA  $I_{CQ}$
- **High speed power-up/-down**
  - Turn on/off time (10%~90%) <100 ns
- **Low shut-down current (~1  $\mu A$ )**
- **On-chip power detection**
  - 20 dB linear dynamic range
- **50 $\Omega$  on-chip input match and simple output match**
- **All lead-free devices are RoHS compliant**

## Applications

- **WLAN (IEEE 802.11a/n/ac)**
- **HyperLAN2**
- **Multimedia**

### Product Description

SST11CP16 is a high-linearity power amplifier with low power consumption and is based on the highly-reliable InGaP/GaAs HBT technology. It can be easily configured for high-linearity, high-efficiency applications, with superb power-added efficiency, while operating over the 802.11a frequency band for U.S. and European markets (5.1-5.9 GHz).

SST11CP16 has excellent linearity, typically ~3% added EVM at 21.5 dBm output power for 54 Mbps 802.11a operation, at 5.0V, while meeting 802.11a spectrum mask at 25 dBm. SST11CP16 provides 19 dBm with less than 1.8% EVM, using 802.11ac modulation with 80 MHz bandwidth and 351 Mbps data rate. This power amplifier also provides a wide dynamic-range, linear power detector that is temperature and VSWR insensitive. This integrated power detector can lower the cost of power control.

The power amplifier IC also features easy board-level operation along with high-speed power-up/down control. Low reference current (total  $I_{REF} < 5$  mA) makes the SST11CP16 controllable by an on/off switching signal directly from the baseband chip. These features coupled with low operating current make the SST11CP16 ideal for the final stage power amplification in 802.11a/n/ac WLAN transmitter applications.

The SST11CP16 is offered in 16-contact XQFN package with 0.5 mm maximum thickness. See Figure 2 for pin assignments and Table 1 for pin descriptions.

### Functional Blocks

### Pin Descriptions

Table 1: Pin Description

Symbol	Pin No.	Pin Name	Type <sup>1</sup>	Function
GND	0	Ground		The center pad should be connected to RF ground with several low inductance, low resistance vias.
NC	1	No Connection		Unconnected pin
RFIN	2		I	RF input, DC decoupled
RFIN	3		I	RF input, DC decoupled
VCCb	4	Power Supply	PWR	Supply voltage for bias circuit
VREF1	5		PWR	Current Control
VREF2	6		PWR	Current Control
VREF3	7		PWR	Current Control
NC	8	No Connection		Unconnected pin
DET	9		O	On-chip power detector
RFOUT	10		O	RF Output, DC decoupled
RFOUT	11		O	RF Output, DC decoupled
NC	12	No Connection		Unconnected pin
NC	13	No Connection		Unconnected pin
VCC3	14	Power Supply	PWR	Power supply, 3 <sup>rd</sup> stage
VCC2	15	Power Supply	PWR	Power supply, 2 <sup>nd</sup> stage
VCC1	16	Power Supply	PWR	Power supply, 1 <sup>st</sup> stage

## SST11CP16

Preliminary Specifications

### Electrical Specifications

The AC and DC specifications for the power amplifier interface signals. Refer to Table 3 for the DC voltage and current specifications. Refer to Figures 4 through 8 for RF performance.

**Absolute Maximum Stress Ratings** (Applied conditions greater than those listed under “Absolute Maximum Stress Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these conditions or conditions greater than those defined in the operational sections of this data sheet is not implied. Exposure to absolute maximum stress rating conditions may affect device reliability.)

Supply Voltage at pins 4, 14, 15, and 16 ( $V_{CC}$ )	-0.3V to +5.9V
Supply Voltage at pins 5,6, and 7 ( $V_{REF}$ )	-0.3V to +3.6V
DC supply current ( $I_{CC}$ )	600 mA
Operating Temperature ( $T_A$ )	-20°C to +85°C
Storage Temperature ( $T_{STG}$ )	-40°C to +120°C
Maximum Junction Temperature ( $T_J$ )	+150°C
Maximum Output Power	27 dBm
Surface Mount Solder Reflow Temperature	260°C for 10 seconds

**Table 2: Operating Range**

Range	Ambient Temp	$V_{CC}$
Industrial	-10°C to +85°C	5.0V-5.5V

T2.1 75050

**Table 3: DC Electrical Characteristics**

Symbol	Parameter	Min.	Typ	Max.	Unit
$V_{CC}$	Supply Voltage		5.0		V
$I_{CC}$	Supply Current @ $P_{OUT} = 22$ dBm $V_{CC} = 5.0V$		340		mA
$I_{CQ}$	$V_{CC}$ Quiescent Current $V_{CC} = 5.0V$		250		mA
$I_{OFF}$	Shut down current		1.0	10	$\mu A$
$V_{REG}$	Recommended Reference Voltage		2.85		V
$I_{REG}$	Total Reference Current		2		mA
$V_{DET}$	RF Power Detector Voltage Output level	0.4		1.1	V
